

## In this Chapter :

- Specification for exits, stairs, exit access, exit corridors, exit discharge
- Doors, handrails, locks and latches, and access Control
- Travel distances, dead ends, common-paths, and occupant Loads
- Single exit allowance

## Intent of the Chapter

- Provide adequate number of exits and corridors, restrict travel distances and provide building features such that people can carry out evacuation efficiently to point of safety, out of the building.
- To enable designers to consider floor plans and exit widths that can accommodate people movement and evacuation fluently as per required occupant loads.
